01 / PROGRAMME OVERVIEW

Loyalty & Rewards

Supermart purchase rewards, local fulfilment and digital education

1,000,000,000 HBX

100% of the recorded supply allocated to loyalty and rewards

HYBRIX Supermart connects shoppers, merchants and local stockists. Members can shop online, merchants can list products and manage orders, and participating stockists support local pickup.

Why HBX

HBX is a BEP-20 token intended for qualifying loyalty rewards. Members first earn points in the Supermart ledger. The programme design allows eligible members to convert available points into HBX and request a withdrawal after the relevant controls and services are ready.

What the allocation means

The full supply is the ceiling for rewards across all phases. Allocation, approved phase budgets, and completed on-chain distributions are distinct figures. This whitepaper describes the programme design and phased release policy.

Programme status

Rollout and on-chain withdrawals are subject to operational readiness. Public token sale status, price, dates and terms remain TBC. The current allocation assigns 100% to loyalty and rewards.

02 / DISTRIBUTION ROADMAP

Release by phase

Phase progression depends on reconciliation and programme readiness

Phase 1 | Supermart members and stockists

The initial member campaign targets the first 1,000,000 Supermart members, with 100,000,000 HBX earmarked for qualifying member rewards. The campaign also targets the first 1,000 qualifying stockists at 10,000 points per qualifying RM3,000 initial stock purchase, equivalent to 10,000,000 HBX at the proposed conversion rate.

The stockist campaign accounting is pending. Before Phase 1 release, HYBRIX will confirm whether the 10,000,000 HBX sits inside the 100,000,000 HBX Phase 1 budget or is separately earmarked from the same 1 billion HBX loyalty allocation. The release ledger must count each amount once.

Phase 2 | Wider Supermart participation

Expand purchase-based rewards once Phase 1 orders, points, refunds and withdrawals can be reconciled. Evaluate campaigns with participating merchants and stockists under published eligibility rules.

Phase 3 | Ongoing loyalty campaigns

Release further HBX through approved loyalty campaigns as participation and operational capacity grow. Phase 2 and Phase 3 amounts, start dates and release schedules are TBC.

Release controls

Each phase requires an approved budget, published eligibility rules, reconciled liabilities and a verified distribution record. The combined phase budgets must stay within 1,000,000,000 HBX.

03 / PROGRAMME DESIGN

From purchase to reward

Internal points accrue before a member requests a token withdrawal

1. Join and qualify

Supermart membership is free. The minimum qualifying member purchase is RM100. Eligible purchases earn one internal point per RM1 of eligible spend. A qualifying RM100 purchase earns 100 points.

2. Track points in Supermart

Points are recorded as Pending during order, refund, fraud and budget checks. Cleared points become Available and contribute to the Accumulated balance. Refunds and reversals adjust the ledger under the programme rules.

3. Convert and withdraw

The proposed conversion minimum is 10,000 available points, which convert 1:1 to 10,000 HBX. Wallet setup is optional until withdrawal. An approved withdrawal goes to the member’s compatible BNB Smart Chain wallet after address and eligibility checks.

4. Reconcile each distribution

The withdrawal queue records the request, approval, broadcast and on-chain confirmation. The treasury reconciliation links each transfer to its ledger entry and transaction hash. BNB is used for network gas.

CSR Digital Academy

Members can access education on blockchain basics, wallet safety and digital-asset risks without withdrawing HBX. The programme aims to help participants understand wallet addresses, custody, transaction fees and common scams.

04 / TECHNICAL REFERENCE

Token & governance

Contract reference, custody responsibilities and project contacts

Network and supply

HYBRIX Token (HBX) is recorded as a BEP-20 token on BNB Smart Chain Mainnet, chain ID 56, with 18 decimals and a total supply of 1,000,000,000 HBX.

BscScan / 0x80175fe11c16e271170fFF0b3CE93d57505b9377

Issuer and custody

Project records identify SBP Health Food & Beverages Sdn. Bhd. as the original issuer and owner of the primary treasury wallet. Treasury releases require authorisation, custody controls and reconciliation. Any future SPV mandate or transfer of rights remains subject to formal documentation.

Allocation policy

The loyalty allocation supersedes the previous proposed allocation table, including the separate crowdfunding, liquidity, staking, founder, promotion and voucher allocations. Token holdings and circulating supply must be verified on-chain before any circulation figures are published.

Participant risks

Token withdrawals depend on programme availability, eligibility and network confirmation. HBX may fluctuate in value and liquidity. Wallet loss and irreversible transfers can result in permanent loss. HBX does not confer equity or profit rights.
